

More and more people are opting for an exterior propane pool heater, as it provides a faster output and is cost-efficient.

You will find below, a sketch showing the minimal distances needed to install an exterior propane pool heater. Generally, you must allow for a minimum distance of 18 inches (0.5 m) from the property line and/or the fence to install your apparatus and make sure that the propane cylinder is at least 10 ft (3 m) from the apparatus and any source of combustion.

To install your heater in a shed, consult the manufacturer's installation manual and remember that this type of installation requires very strict standards concerning the venting system. You cannot store any chemicals such as chlorine in the same location
